SKILLS

- C
- PYTHON
- PHP
- MYSQL
- C# & ASP.NET
- JAVASCRIPT

EDUCATION

WeThinkCode_
2018-2020

This is where I learnt how to code through bootcamps, peer-to-peer learning and hackathons.

PROFILE

I am a Junior Software Developer with over a year of experience and I love to create using code. I fully automated an essential process during my time as an intern and jumped into web development after my graduation. I love exploring with different languages and technologies.

EXPERIENCE

Graduate Full Stack Software Developer
Dariel
March 2020 - December 2020

At Dariel, I learned how to build a project from scratch, and also how to add to and maintain existing code. I did some minor work on setting up a server remotely. I also worked on the graduate magazine, doing photoshoots and writing articles. I learned to work as part of a team in order to deliver a complete final product. From SOLID principles to C# and some Angular, I have gained a lot of good skills that I intend on putting to good use.

Software Development Intern
WeThinkCode_
January 2019 - May 2019

During my final year, I had an internship at my school for five months. I automated a previously manual process with a Python program. I also helped conduct coding bootcamps and would help prospective students with technical questions. As a staff member, it put all the skills I had learned to the test as I had to explain and demonstrate what I knew to others.
